

Functional Requirements

ID	Functional Requirement
FR01	The system shall allow the owner to view all transaction records
FR02	The system shall allow the owner to add new transaction records
FR03	The system shall allow the owner to edit existing transaction records
FR04	The system shall allow staff to view transaction records only
FR05	The system shall prevent staff from editing or deleting records
FR06	The system shall record the buyer/source name for each transaction
FR07	The system shall record what was bought or sold for each transaction
FR08	The system shall record the amount for each transaction
FR09	The system shall store all financial transactions made by the company
FR10	The system shall generate a daily report of all transactions
FR11	The system shall allow the owner to generate invoices
FR12	The system shall store transaction history permanently
FR13	The system shall require users to log in before accessing records
FR14	The system shall only allow the owner and staff to access the system

Non-Functional Requirements:

ID	Category	Non-functional Requirement
NFR01	Security	The system shall protect financial data so only authorised users can access it
NFR02	Security	User passwords shall be stored securely and encrypted

NFR03	Usability	The system shall be easy to use for users with different technical skill levels
NFR04	Usability	The system shall work on modern web browsers (Chrome, Edge, Safari)
NFR05	Reliability	The system shall save all transaction records without data loss
NFR06	Reliability	The system shall be available during business hours (9am–5pm)
NFR07	Speed	The system shall load transaction records within 2 seconds
NFR08	Maintainability	The code shall be clearly commented so the developer can fix defects easily
NFR09	Robustness	The system shall handle invalid input without crashing (e.g. text in amount field)
NFR10	Portability	The system shall work on different devices (PCs and laptops)

Purpose and requirements

Purpose and requirements:

Malina is a small events organization company's owner who is currently facing challenges in managing financial records using outdated manual processes. This inefficiency leads to financial errors, poor budgeting, and profit loss. Malina needs an affordable and easy to use transaction record keeping system software that can keep a record of these purchases.

Constraints

Constraints:

Economic constraints

- The project must be completed within the VCE School Year timeline (by end of 2026)
- The development is done by a student with no budget for paid hosting, so free hosting must be used

Technical constraints

- The system must work in web browsers like Chrome, Edge, and Safari
- The system must store transaction data permanently in a database
- The system must have user authentication so only authorised users can access it
- The website must be accessible on the devices the owner and staff use (PCs/laptops)

Legal constraints

- The system must comply with the Privacy Act 1988 (Cth) as it stores financial and business data
- The system must keep financial records for at least 5 years as required by the ATO for tax purposes
- Copyright Act 1968 applies to any code, images, or content used in the website

Social constraints

- The owner and staff may have different levels of technical expertise, so the system must be easy to use
- Staff need to be able to view records without training on complex systems

Scope

Scope:

- The website will store all financial transactions digitally in one central place
- The owner will be able to view, edit, and add transaction records
- Staff will be able to view transaction records only
- The system will record all financial transactions made by the company
- Each transaction will record the buyer/source name, what was bought/sold, and the amount
- The system will generate a daily report of all transactions that happened
- Transaction history will be stored permanently for future reference and auditing
- Only the owner, staff, and developer will be able to access the system
